

HERD IMMUNITY = NATURAL VACCINATION

Flatten The Curve Means Everyone Is Going To Get Infected and Naturally Vaccinated

FLATTEN THE CURVE - BACKGROUND

The strategy of "Flatten-The-Curve" was meant to give the Medical Community more time to "stockpile" resources & gain medical knowledge, of which they have accomplished. e.g., doctors have switched from ventilators to high blood pressure medication to address the tiny blood clots that Covid-19 causes.

YOU CAN ONLY FLATTEN-THE-CURVE, NOT END-THE-CURVE

Flatten The Curve Means Everyone Is Going To Get Infected. Which is just like the Annual Flu and Common Cold. And if everyone is already infected, then that means Natural Vaccination.

FLATTEN THE CURVE - THE END RESULT MEANING

If you take away nursing homes and co-morbid conditions like Obesity and Cancer, We have a 99.99% recovery rate Hence, 99.99% of the remaining population will recover from Covid19, just like the Annual Flu & Common Cold. And that's without a Vaccine Shot as everyone was "naturally" vaccinated anyway. That is, Herd Immunity means Natural Vaccination. Thus, why the need for an experimental vaccine shot (with no long term history like other vaccines) when everyone is naturally vaccinated anyway?
