

OMICRON VARIANT Milder?

Or, is Your Natural Vaccination (Herd Immunity) Working Like It Is Supposed To Work?

It's been TWO (2) YEARS! ... *Herd Immunity* has already been set in. (Or more, depending upon when you read this). So virtually All of the Population has been *naturally vaccinated* anyway, just like the Annual Flu. And this, regardless of Masks, *Experimental* Vaccine Shots, Boosters, or *New* Pill.

NOTE: Let's also point out that 'Survival-of-the-Fittest' was always in play. Accordingly, the "weak" (those in nursing homes or with co-morbid diseases like cancer) already died in the first year, the year 2020; hence, affecting the statistical results of vaccine shots or pills.

So, Mask Wearing, the Vaccine Shot, or Pill Benefits are for those who already have Natural Immunity, which is everyone, anyway.

And, likewise, newer Variants like the Delta and Omicron, will affect an entire population that has been Naturally vaccinated anyway from not just one variant, but also multiple variants.

Hence, Omicron's effects are "mild" as they should be, when everyone was naturally vaccinated anyway.
