

COVID-19 VACCINES

BEFORE AND AFTER DIFFERENCE

#1 -BEFORE COVID-19 VACCINES:

Q: Where were most of the Covid-19 deaths?

A: Nursing Homes and Co-Morbid Patients.

#2 - AFTER COVID-19 VACCINES:

Q: Where were most of the Covid-19 deaths?

A: Nursing Homes and Co-Morbid Patients.

Hence, why should we not expect Covid-19 vaccines to be no more effective than those Annual Flu vaccines preventing the flu deaths in nursing homes? And why should those under the age of 70 be required to have a Covid-19 vaccine when there is already a 99.998% survival rate without vaccines?
