

SCIENTIFIC

Curiosity

QUESTION:

What is the drive, that thing, that causes the scientist to look around the corner of a less traveled path? Or, what is the drive, that thing, that keeps the scientist experimenting and researching their unproven hypothesis after years (and decades) of failed experiments?

ANSWER:

It is Hope that something useful will be discovered and Faith in that, the 'unproven' ...will be 'proven'.

**SCIENTIFIC
CURIOSITY = HOPE + FAITH**
